 - Bootstrap
 - TailwindCSS
- **Tools**
 - Git
 - Github
 - npm
- **Design**
 - Figma
 - Canva
- **Other**
 - Agile Methodologies
 - Responsive design
 - Cross-Browser Compatibility
 - BEM naming convention
 - Jira
 - Conductrics

PROFESSIONAL SUMMARY

I am a Front-End Developer with 4 years of experience in designing and developing user-friendly, responsive websites and web applications. Proficient in HTML, CSS, JavaScript, and modern frameworks such as React and NextJS.

Initially self-taught, my passion has then enabled me to gain a full-time position in an engineering team. Being a self-taught developer has required a lot of dedication, curiosity and a willingness to learn from various resources, online tutorials, documentation and community forums. There has been a lot of trial and errors, but each mistake has been a valuable learning opportunity.

I have been engaged in mobile app development under the guidance of a mentor for the past year, utilising Swift and SwiftUI, as I aspire to enter the mobile app development industry.

I really enjoy being in team-oriented environments and believe that collaboration and teamwork are essential for achieving the best results. I am always eager to take on new challenges and collaborate with others to create innovative and impactful digital solutions.

Outside of my professional life, I am a proud husband and father. My wife and i are blessed with three wonderful children who bring joy and inspiration to our lives every day. Family is at the heart of everything i do, and their support fuels my drive to succeed.

EXPERIENCE

FRONT END DEVELOPER

Experian PLC – Nottingham

August 2021 – Present

- The primary technologies I utilise include React, TypeScript, NextJS, Figma, Jest, and various other tools that complement these frameworks and libraries (like HTML, CSS/SCSS).
- Utilised version control systems (Git) to manage codebase and track changes.
- Assist in managing and maintaining a diverse range of repositories across the organisation.
- Implement optimisations, conduct A/B tests, or introduce new and enhanced features.
- Collaborate with a broad spectrum of stakeholders within the business, engaging with product owners, designers, testers, and fellow developers to create the best possible application.
- Responsibilities involved developing tickets from conception to deployment, code reviews, technical refinements, identifying and documenting bugs and improvements, proactively supporting my team.

Projects I worked on –

Automated the generation of over 200 guide pages using Node.js and JavaScript.

- By developing a script that automates the generation of these pages, it enabled our product owners to quickly and efficiently produce new guide pages without requiring manual intervention from developers.
- The script allowed us to update and create pages en masse, saving hundreds of hours of manual work.
- It ensured all guide pages followed a uniform format, improving the user experience.
- Freed up developer time for more complex tasks, enhancing overall productivity
- Streamlined internal processes and improved the quality and accessibility of customer-facing content.

Automated the generation of privacy policy PDFs creation using CSS, when changes are made to the privacy policy page.

- Using media queries and @page to control printed content
- This ensures the copy of the PDF matches exactly what is on the page, the formatting is correct and eliminating the need for manual conversion.
- Streamlined the process, saving time for coders, code reviewers, and QA
- Enhanced the overall end-to-end process for updating privacy policies.

BUSINESS SUPPORT SOLUTIONS ANALYST

Experian PLC – Nottingham

April 2016 – August 2021

- 3rd line support for Business Solutions in PowerCurve
- Investigate incidents and cases logged in Service Now. Provide my findings to the client via email or telephone.
- Provide estimates to business consultants for client requested changes.
- Create Change Specification documents that would be read by clients and business consultants.
- Create client pages in our Confluence knowledge base and gather functional information to help support the client once the project has been handed over to support.
- Maintain our internal website that was developed and designed by myself.
